

GeoMax building connection set for EZiTEX

For quick and easy location of power cables

Product number :27513000

Topfeatures

- Ideal for quick and easy location of the power cable.

All special features at a glance

- For applying a locatable signal to live cables.
- Used in conjunction with an EZiTEX signal generator.

Description

The building connection kit is used to apply a locatable signal to conductive media and is used in conjunction with an EZiTEX signal generator. This makes it possible to trace the lines within a property to the main supply network or to outdoor buildings. The building connection kit is connected to a live electrical outlet. With the help of the EZiTEX signal generator, a locatable signal is applied, which is then recognised by an EZiCAT line location system. The operating frequency is 33 kHz.

Technical Details

Operating frequency	33 kHz
