- Housing base made of aluminium, cover and rotary knobs made of plastic.
- Large, ergonomically shaped knob for focusing.
- Easy-to-reach rotary knobs on both sides for the fine drive.

Description

The levels of the NAL series impress with their robust and high-quality construction. The air-damped, precisely working compensator and the excellent optics make the NAL levels a reliable partner for your daily height transfers and levelling work at an optimal price-performance ratio. The type 2 of the NAL series is a version that has been revised in detail and consistently further developed with the proven technical features of the NAL series and thus forms the ideal levelling device for the construction industry.
