

## NESTLE Laser Telescopic Levelling Staff 5 m

### Robust and precise

Product number :18204000

### All special features at a glance

- Easy reading of the height
- mm graduation for measuring clear heights
- Robust construction
- Imprint protected from abrasion by protruding edges.
- Stable push-button latching prevents the parts from collapsing.
- Easy and precise guidance of the individual elements without jamming.

### Description

The continuous mm graduation on the front makes the telescopic metre perfect for rotary lasers and levels. The telescopic metre can be extended telescopically up to 5m. The segments can be extended one after the other and are therefore perfect for measuring clear heights. The telescopic metre is robust and always meets the daily requirements on construction sites. The imprint is protected from abrasion by protruding edges. The stable push-button grid prevents the individual parts from slumping together. Due to the precise guidance of the individual elements, it is smooth-running and does not jam.

### Technical Details

Weight	1700 g
Length	1,24 - 5,00 m

### Scope of supply
