- Load, calculate, display and manage data from total stations, GNSS, digital levels and laser scanners.

All special features at a glance

- X-PAD Office ensures productivity in the office and offers perfect integration between measuring devices.
- Versatile import / export possibilities
- Different data formats for laser scanner point clouds

Description

X-PAD Office Fusion is a desktop software that integrates geospatial data from TPS, GNSS, scanners and other sensors in a single environment. Unlike other software solutions on the market, X-PAD Fusion provides a software solution that manages measurements, points, drawings, surfaces, point clouds and other data types on ONE platform in a simple and intuitive way. We help you get started right away with our interactive tutorials that guide you through the entire workflow to make it even easier to use
