

GeoMax EZiROD 50, bending rod on drum

Bending rod on drum with 50 metres

Product number :27505000

All special features at a glance

- Tracing the course of pipes or sewers.
- Locating blockages or collapses in sewers.
- Locating or tracking non-metallic pipes that do not produce a signal.

Description

The EZiROD bending rod can be used in conjunction with an EZiTEX signal transmitter and an EZiCAT pipe locating system to locate the course of non-metallic drain lines, sewers or pipes. The EZiROD is pushed through the supply line to be examined. The signal generated can either be transported along the entire length or only in the end. The bending rod consists of a glass fibre coil with a metallic locating wire in the cable core.
