All special features at a glance

- Ideal for locating or tracking non-metallic pipes that do not produce a signal.
- Depth range of up to 5 m

Description

The GeoMax Midi Probe is a compact dual frequency probe for locating drains, sewers and other non-conductive utilities. It works like a signal generator and can be attached to various devices such as pipe cleaning rods, drills or security cameras. This makes it possible to follow the course of a pipe or determine the position of blockages. The probe operates at 8 kHz or 33 kHz with its own power supply.
