

NESTLE CT-01 2-way set

Detect inaccessible shafts, tanks, bridges or barrel ends

Product number :13954000

Topfeatures

- Suitable for tripod NESTLE CT-01
- Operation up or down
- Robust construction

All special features at a glance

- Stepless use upwards and downwards
- For surveying shafts, tanks, facades or bridges
- Reach inaccessible areas easily and safely

Description

The 2-way set 13954000 is an accessory for extending the range of functions of the NESTLE carbon tripod CT-01. Fix your scanner to the lifting rod -overhead- and work downwards for shaft or tank surveys - or fix your scanner to the lifting rod -upright- and work upwards, thus increasing the installation height and also reaching inaccessible positions on facades or bridges. For downward operation, the use of the NESTLE quick coupling for fall protection is strongly recommended - not included.
