

NESTLE Forestry caliper Specht 80 cm, conformity rated D1

Efficient work - with the double function of the Specht measuring clamp

Product number :20302001

Topfeatures

- The movable log splitter is simply placed anywhere on the tree trunk.
- The lower stop on the head of the measuring clamp is exactly 1 m away from the timber ripper (only applies to woodpecker 80 cm).
- The upper stop is 1 cm above the lower stop and thus automatically calculates the offcut by your saw.
- The technical features guarantee comfortable handling even under difficult conditions.
- The measuring clamp is extremely robust and resistant for many years of hard use.

All special features at a glance

- Ideal cut-to-length clip.
- 2 functions: Cut to length and determine tree diameter.
- Suitable for use with hand saws and chainsaws due to stops with movable wood ripper.
- The caliper of the measuring clamp slides over the measuring rail without jamming, showing exact measuring results.
- The anodised layer prevents abrasion of the deep black numbers and makes the Specht measuring clamp insensitive to wind and weather.
- The deep black numerals under the titanium-coloured anodised coating are easy to read even in twilight.
- 30 mm oval profile with a special alloy for high bending strength.
- Push handle made of impact-resistant polyamide, the measuring legs are welded of sturdy aluminium.
- Standard and calibrated* available. * Since 01.01.2018, our measuring clamps have been conformity-assessed according to module D1 (certificate DE-M-AQ-PTB144 issued by PTB Braunschweig). (For Germany: The measuring clamps, like the calibrated clamps in the past, can be used in commercial transactions for an unlimited period of time. Recalibration is only required in the event of repair).

Description

With the Specht cross-cutting measuring clamp you have two extremely practical functions combined in one clamp. Cut to length and determine log diameter. Thanks to the stops with movable wood ripper, the clamp is perfectly suited for use with hand saws and chainsaws. The practical and robust design with oval profile, where the caliper slides over the measuring rail without jamming, proves the high quality coating. The special laser-engraved printing process makes the numbers easy to read even in twilight, and an anodised coating reliably prevents abrasion. At the same time, this ensures easy cleaning of resins and dirt. The special alloy makes the dial extremely resistant to bending, robust and durable. Available as standard and "calibrated" version in two lengths.

Technical Details

Weight	1650 g
Length	80 cm
Measuring rail	Oval, 30 x 15

Scope of supply

Forestry caliper
